

ADOLESCENT MEDICINE SPECIALIST

Accepting Consult Referrals

REBEKAH FENTON, MD, MPH

Adolescent Medicine is a specialty focused on patients ages 10-24 and their unique health concerns. I completed Adolescent Medicine training to better understand the needs of this special population and empower them with health information and access in their transition to adulthood. I strive to support teenagers and their families to seek answers, navigate challenges, and ultimately thrive through compassionate, nonjudgmental, and culturally sensitive care for adolescents and their families.

Accepting referrals for the following concerns:

- Menstrual concerns, including heavy, painful, or irregular periods
- Birth control, including IUD and Nexplanon placements
- PrEP (Pre-exposure prophylaxis for HIV)
- Sexual health testing and treatment

The above services can be provided through enrollment in the Family Planning/Title X Program to ensure patient confidentiality and service affordability.

- Anxiety, depression, and ADHD evaluation and medication management
- Acne management
- Eating disorders, including bulimia and anorexia
- Hormone therapy for transgender and gender non-conforming youth
